"Town Crier connects the Ethereum blockchain with web sources that use HTTPS. In 2020, Chainlink integrated DECO, a Cornell project co-created by Juels. DECO is described by its authors as a protocol that uses zero-knowledge proofs to allow users to prove information is true to a blockchain oracle without revealing sensitive information, such as birth dates. Chainlink published a second white paper in April 2021. That paper, Chainlink 2.0: Next Steps in the Evolution of Decentralized Oracle Networks, detailed a vision for expanding the role and capabilities of decentralized oracle networks to include hybrid smart contracts, which utilize on-chain code and off-chain services provided by oracle networks. Technology Chainlink's decentralized oracle network is an open-source technology infrastructure that allows any blockchain to securely connect to off-chain data and computation resources."

"Stefan Thomas, a Swiss software engineer and active community member, graphed the timestamps of each of Nakamoto's bitcoin forum posts (more than 500); the chart showed a steep decline to almost none between 5 a.m. and 11 a.m. Greenwich Mean Time (midnight to 6 a.m. Eastern Standard Time). This was between 2 p.m. and 8 p.m. Japan Standard Time, suggesting an unusual sleep pattern for someone living in Japan. "On June 16, further attention was called to recursive call vulnerabilities by bloggers affiliated with the Initiative for CryptoCurrencies & Contracts (IC3). On June 17, 2016, the DAO was subjected to an attack exploiting a combination of vulnerabilities, including the one concerning recursive calls, that resulted in the transfer of 3.6 million Ether - around a third of the 11.5 million Ether that had been committed to The DAO - valued at the time at around \$50 million. The funds were moved into an account subject to a 28-day holding period under the terms of the Ethereum smart contract so were not actually gone. Members of The DAO and the Ethereum community debated what to do next, with some calling the attack unethical but valid, since it did not violate DAO rules as coded, while others called for the Ether to be re-appropriated and/or The DAO to be shut down. The DAO community manager, Griff Green, organized a volunteer group of coders known as The White Hat Group to recoup the funds in the other 500 wallets before they could also be hacked. Eventually on July 20, 2016, the Ethereum network was hard forked to move the funds in The DAO to a recovery address where they could be exchanged back to Ethereum by their original owners."

"The mining process involves identifying a block that, when hashed twice with SHA-256, yields a number smaller than the given difficulty target. While the average work required increases in inverse proportion to the difficulty target, a hash can always be verified by executing a single round of double SHA-256. For the bitcoin timestamp network, a valid proof of work is found by incrementing a nonce until a value is found that gives the block's hash the required number of leading zero bits. Once the hashing has produced a valid result, the block cannot be changed without redoing the work. As later blocks are chained after it, the work to change the block would include redoing the work for each subsequent block. If there is a deviation in consensus then a blockchain fork can occur."
