"Historian Liza Bakewell has stated that Kahlo "recognized the conflicts brought on by revolutionary ideology": What was it to be a Mexican? – modern, yet pre-Columbian; young,

yet old; anti-Catholic yet Catholic; Western, yet New World; developing, yet underdeveloped; independent, yet colonized; mestizo, yet not Spanish nor Indian. To explore these questions through her art, Kahlo developed a complex iconography, extensively employing pre-Columbian and Christian symbols and mythology in her paintings. In most of her self-portraits, she depicts her face as mask-like, but surrounded by visual cues which allow the viewer to decipher deeper meanings for it. Aztec mythology features heavily in Kahlo's paintings in symbols including monkeys, skeletons, skulls, blood, and hearts; often, these symbols referred to the myths of Coatlicue, Quetzalcoatl, and Xolotl. Other central elements that Kahlo derived from Aztec mythology were hybridity and dualism. Many of her paintings depict opposites: life and death, pre-modernity and modernity, Mexican and European, male and female."

"Characteristics As with other cryptocurrencies, the validity of each ether is provided by a blockchain, which is a continuously growing list of records, called "blocks", which are linked and secured using cryptography. By design, the blockchain is inherently resistant to modification of the data. It is an open, distributed ledger that records transactions between two parties efficiently and in a verifiable and permanent way. Unlike bitcoin, Ethereum Classic operates using accounts and balances in a manner called state transitions. This does not rely upon unspent transaction outputs (UTXOs). The state denotes the current balances of all accounts and extra data."
