Onecoin is one of the more notable examples of cryptocurrency-ponzi schemes: Founded in 2014 by Ruja Ignatova, OneCoin is estimated to have generated US\$4 billion in income. While at least in China some of the investors' funds have been recovered and several members of the organisation arrested in the U.S., Ignatova herself is still at large. Money laundering Due to the inability of third parties to de-pseudonymize crypto transactions criminal entities have often resorted to using cryptocurrency to conduct money laundering. Especially ICOs lacking KYC guidelines and anti-money laundering procedures are often used to launder illicit funds due to the pseudonymity they offer. By using ICOs criminals launder these funds by buying tokens off of legitimate investors and selling them."
